The application has been amended as follows:

Amend claim 4 as follows:

4. The connecting apparatus according to claim 3, wherein the control means receives load information from the first sensor and displacement amount information from the second sensor, and determines a connecting state of the crimp pieces to the conductor when the flat cable is connected to the connecting terminal.

2. The following is an examiner's statement of reasons for allowance: None of the prior art discloses the claimed connecting apparatus for connecting a flat cable to a connecting terminal, in which the connecting apparatus connects a flat cable having a plurality of flat conductors arranged in parallel and having surfaces covered with an insulating material to a connecting terminal by piercing a plurality of crimp pieces, formed integrally with a substrate of the connecting terminal, into a desired conductor of the flat cable, and by inwardly bending leading ends of the crimp pieces penetrating the flat cable to hold the desired conductor there between, comprising a receptacle having a pair of receiving grooves for receiving the crimp pieces, and a bending recess for

bending the leading ends of the crimp pieces; and urging member having an urging tool; first driving means for moving the receptacle up and down; second driving means for urging the urging tool toward the substrate; moving means for moving the receptacle to selectively place the receiving groove or the bending recess opposite the connecting terminal; and control means for controlling the connecting apparatus.
